# Introduction

- 1 understanding:
  - process execution
  - scripts, binaries, and python modules
- 2 knowledge:
  - distribute software
  - sources and binaries
- 3 advices:
  - software management on a system

- 1 linux
- 2 macos, \*BSD
- 3 windows

- 1 linux
- 2 macos, \*BSD
- 3 windows
  - with CMake
  - with WSL

## Part 1: Understanding execution

## Executable file

```
gsaurel@linux ~$ ls -l ex  
-rwxr-xr-x [...] my-script
```

```
gsaurel@linux ~$ cat ex/my-script  
#!/bin/bash  
echo hello
```

## Executable file

```
gsaurel@linux ~$ ls -l ex  
-rwxr-xr-x [...] my-script
```

```
gsaurel@linux ~$ cat ex/my-script  
#!/bin/bash  
echo hello
```

```
gsaurel@linux ~$ /home/gsaurel/ex/my-script  
hello
```

## Executable file

```
gsaurel@linux ~$ ls -l ex  
-rwxr-xr-x [...] my-script
```

```
gsaurel@linux ~$ cat ex/my-script  
#!/bin/bash  
echo hello
```

```
gsaurel@linux ~$ /home/gsaurel/ex/my-script  
hello
```

```
gsaurel@linux ~$ ./ex/my-script  
hello
```

```
gsaurel@linux ~$ echo $PATH  
/usr/local/bin:/usr/bin:/bin
```

```
gsaurel@linux ~$ echo $PATH  
/usr/local/bin:/usr/bin:/bin
```

```
gsaurel@linux ~$ export PATH=/home/gsaurel/ex:$PATH  
gsaurel@linux ~$ my-script  
hello
```

```
#include <iostream>

int main() {
    std::cout << "hello" << std::endl;
    return 0;
}
```

## Binary file: binary

```
gsaurel@linux ~/ex$ g++ -o my-bin main.cpp
gsaurel@linux ~/ex$ my-bin
hello
```

```
gsaurel@linux ~/ex$ g++ -o my-bin main.cpp
```

```
gsaurel@linux ~/ex$ my-bin
```

```
hello
```

```
gsaurel@linux ~/ex$ ls -l
```

```
-rw-r--r-- [...] main.cpp
```

```
-rwxr-xr-x [...] my-bin
```

```
-rwxr-xr-x [...] my-script
```

```
gsaurel@linux ~/ex$ ldd my-bin
linux-vdso.so.1 (0x00007ffffb5ff1000)
/lib/x86_64-linux-gnu/libnss_sss.so.2 (0x0000722d9)
libstdc++.so.6 => /usr/lib/x86_64-linux-gnu/libstdc++.so.6 (0x0000722d90bce000)
libc.so.6 => /usr/lib/x86_64-linux-gnu/libc.so.6 (0x0000722d90bce000)
libm.so.6 => /lib/x86_64-linux-gnu/libm.so.6 (0x0000722d90bce000)
/lib64/ld-linux-x86-64.so.2 (0x0000722d90bce000)
libgcc_s.so.1 => /lib/x86_64-linux-gnu/libgcc_s.so.1 (0x0000722d90bce000)
```

```
#include <iostream>
#include <cpr/cpr.h>

int main() {
    cpr::Url url{"https://www.laas.fr/fr/"};
    cpr::Response r = cpr::Get(url);
    std::cout << r.text << std::endl;
    return 0;
}
```

```
gsaurel@linux ~/ex$ g++ -o my-bin main.cpp
/usr/bin/ld : /tmp/ccAcavy5.o : dans la fonction « c
main.cpp:(.text._ZN3cpr3GetIJRNS_3UrLEEEENS_8Respons
/usr/bin/ld : main.cpp:(.text._ZN3cpr3GetIJRNS_3UrLE
/usr/bin/ld : /tmp/ccAcavy5.o : dans la fonction « w
main.cpp:(.text._ZN3cpr4priv19set_option_internalILB
/usr/bin/ld : /tmp/ccAcavy5.o : dans la fonction « s
main.cpp:(.text._ZNSt4pairIKNSt7__cxx1112basic_stri
collect2: erreur: ld a retourné le statut de sortie
```

```
gsaurel@linux ~/ex$ g++ -o my-bin -l cpr main.cpp
gsaurel@linux ~/ex$ my-bin
<!DOCTYPE html>
<html lang="fr">
<head>
    <title>
        Accueil - LAAS-CNRS
    [...]
```

To compile, my-bin require:

- /usr/lib/libcpr.so
- /usr/include/cpr/cpr.h

To compile, my-bin require:

- /usr/lib/libcpr.so
- /usr/include/cpr/cpr.h

Or add:

- g++ -L ..., if libcpr.so is elsewhere
- g++ -I ..., if cpr/cpr.h is elsewhere

To run, my-bin require:

- /usr/lib/libcpr.so

To run, `my-bin` require:

- `/usr/lib/libcpr.so`

If `libcpr.so` is elsewhere, one can:

- set `$LD_LIBRARY_PATH` environment variable
- set `RPATH` attribute inside `my-bin` binary

```
gsaurel@linux ~/ex$ ldd my-bin
  linux-vdso.so.1 (0x00007fff9188b000)
  libcpr.so.1 => /usr/lib/libcpr.so.1 (0x00007217e000)
  libstdc++.so.6 => /usr/lib/libstdc++.so.6 (0x00007217e000)
[...]
```

either:

- `my_module.py`
- `my_module.so`
- `my_module/__init__.py`

either:

- `my_module.py`
- `my_module.so`
- `my_module/__init__.py`

In a folder in the `sys.path` list, modifiable through:

- virtual environments
- `$PYTHONPATH` environment variable
- `.pth` file

either:

- `my_module.py`
- `my_module.so`
- `my_module/__init__.py`

In a folder in the `sys.path` list, modifiable through:

- virtual environments
- `$PYTHONPATH` environment variable
- `.pth` file
- `sys.path.insert(0, "/path")`: please don't do that.

## Part 1: conclusion

Now, you know how to execute softwares, congratulations !

Now, you know how to execute softwares, congratulations !

In case you have any issue at this point:

- 1 ensure you know what you try to run, with which dependencies, from where
- 2 double check if your environment variables match your expectations
- 3 try to reproduce in a pristine environment (VM / container)

## Part 2: Knowledge in build systems

- Make
- Autotools
- Bazel
- CMake
- Meson

- Make
- Autotools
- Bazel
- CMake
- Meson
  
- setuptools
- poetry
- cargo
- npm
- yarn

## CMakeLists.txt

```
cmake_minimum_required(VERSION 3.16)
project(my-project LANGUAGES CXX)
add_executable(my-bin main.cpp)
```

```
gsaurel@linux ~/ex$ cmake -B build -S .
-- The CXX compiler identification is GNU 13.2.1
-- Detecting CXX compiler ABI info
-- Detecting CXX compiler ABI info - done
-- Check for working CXX compiler: /usr/bin/g++
-- Detecting CXX compile features
-- Detecting CXX compile features - done
-- Configuring done (0.3s)
-- Generating done (0.0s)
-- Build files have been written to:
/home/gsaurel/ex/build
```

## Compile and run

```
gsaurel@linux ~/ex$ cmake --build build
[ 50%] Building CXX object CMakeFiles/my-bin.dir/main.cpp.o
[100%] Linking CXX executable my-bin
[100%] Built target my-bin

gsaurel@linux ~/ex$ ./build/my-bin
hello
```

```
cmake_minimum_required(VERSION 3.16)
project(my-project LANGUAGES CXX)
add_executable(my-bin main.cpp)
install(TARGETS my-bin)
```

```
cmake_minimum_required(VERSION 3.16)
project(my-project LANGUAGES CXX)
add_executable(my-bin main.cpp)
install(TARGETS my-bin)
```

```
gsaurel@linux ~/ex$ cmake --build build -t install
[100%] Built target my-bin
Install the project...
-- Installing: /usr/local/bin/my-bin
CMake Error at cmake_install.cmake:52 (file):
  file INSTALL cannot copy
  file "/home/gsaurel/ex/build/my-bin"
  to "/usr/local/bin/my-bin":
Permission denied.
```

```
gsaurel@linux ~/ex$ cmake -B build \
    -DCMAKE_INSTALL_PREFIX=~/my-pfx
-- Configuring done (0.0s)
-- Generating done (0.0s)
-- Build files have been written to:
      /home/gsaurel/ex/build
gsaurel@linux ~/ex$ cmake --build build -t install
[100%] Built target my-bin
Install the project...
-- Installing: /home/gsaurel/my-pfx/bin/my-bin
```

Header: include/my-lib.hpp

```
#pragma once
int add(int a, int b);
```

Source: src/my-lib.cpp

```
#include "my-lib.hpp"
int add(int a, int b) { return a + b; }
```

```
add_library(my-lib SHARED
    include/my-lib.hpp
    src/my-lib.cpp)
target_include_directories(my-lib PUBLIC
    ${BUILD_INTERFACE}:${CMAKE_SOURCE_DIR}/include>
    ${INSTALL_INTERFACE}:${CMAKE_INSTALL_INCLUDEDIR}>)
target_link_libraries(my-bin my-lib)
install(FILES include/my-lib.hpp
    DESTINATION ${CMAKE_INSTALL_INCLUDEDIR})
install(TARGETS my-lib)
```

```
gsaurel@linux ~/ex$ cmake --build build -t install
[ 50%] Built target my-lib
[100%] Built target my-bin
Install the project...
-- Installing: /home/gsaurel/my-pfx/bin/my-bin
-- Set non-toolchain portion of runtime path
  of "/home/gsaurel/my-pfx/bin/my-bin" to ""
-- Installing: /home/gsaurel/my-pfx/include/include
-- Installing: /home/gsaurel/my-pfx/include/include/
-- Installing: /home/gsaurel/my-pfx/lib/libmy-lib.so
```

```
gsaurel@linux ~/ex$ export PFX=/home/gsaurel/my-pfx
gsaurel@linux ~/ex$ export LD_LIBRARY_PATH=$PFX/lib
gsaurel@linux ~/ex$ export PATH=$PFX/bin
gsaurel@linux ~/ex$ my-bin
hello, 1+1 = 2
```

```
find_package(cpr REQUIRED)
target_link_libraries(my-lib PUBLIC cpr::cpr)
```

```
find_package(cpr REQUIRED)
target_link_libraries(my-lib PUBLIC cpr::cpr)
```

Configuration now requires:

```
/usr/lib/cmake/cpr/cprConfig.cmake
/usr/lib/cmake/cpr/cprConfigVersion.cmake
/usr/lib/cmake/cpr/cprTargets-release.cmake
/usr/lib/cmake/cpr/cprTargets.cmake
```

```
#include "my-lib.hpp"

int main() {
    if (add(1, 1) == 3) {
        return 0;
    } else {
        return 1;
    }
}
```

```
include(CTest)
if(BUILD_TESTING)
    add_executable(my-test test.cpp)
    target_link_libraries(my-test PUBLIC my-lib)
    add_test(my-unit-test my-test)
endif()
```

## Unit tests: run

```
gsaurel@linux ~/ex$ cmake --build build -t test
Running tests...
Test project /home/gsaurel/ex/build
1/1 Test #1: my-unit-test1/1 Test #1:
my-unit-test.....***Failed      0.00 sec
```

0% tests passed, 1 tests failed out of 1

Total Test time (real) = 0.01 sec

The following tests FAILED:

1 - my-unit-test (Failed)

Errors while running CTest

gmake: \*\*\* [Makefile:71 : test] Erreur 8

- Build systems generate the compilation commands you need, and run those when necessary.
- They can be extended to take care of many other build steps, like:
  - run unit tests
  - install the package
  - build the documentation

- Build systems generate the compilation commands you need, and run those when necessary.
- They can be extended to take care of many other build steps, like:
  - run unit tests
  - install the package
  - build the documentation
- Test your unit tests: ensure they fail when they should

## Part 3: Advices on package management

## Distribution package manager

- apt
- rpm
- pacman
- apk
- ...

- apt
- rpm
- pacman
- apk
- ...

Use those and those alone to manage your OS (sudo, /usr):  
anything else will have high risks of:

- security issues
- break your OS

## Language-specific official package managers

- pip
- npm
- cargo
- cabal
- gem
- ...

- pip
- npm
- cargo
- cabal
- gem
- ...

Use those for development of your projects: they have the best support for it.

## Other package managers

language-specific third-party package managers:

- poetry
- yarn
- stack

general package managers

- robotpkg
- catkin
- colcon
- conda
- guix
- nix

language-specific third-party package managers:

- poetry
- yarn
- stack

general package managers

- robotpkg
- catkin
- colcon
- conda
- guix
- nix

Use those if you know what you do, and come to the next formations to know more !
